# **CONVERGING** Participants

	Participant organization name	Short Name	Country	Organization type	<ul><li>16 partn</li><li>9 countr</li></ul>
1	UNIVERSITY OF PATRAS	LMS	GREECE	RTO	
2	FUNDACION TECNALIA RESEARCH & INNOVATION	TECNALIA	SPAIN	RTO	
3	ELECTROLUX ITALIA SPA	ELUX	ITALY	END USER	LMS
4	ISRAEL AEROSPACE INDUSTRIES LTD	IAI	ISRAEL	END USER	Laboratory for Manufacturing Systems & Automation
5	COMAU SPA	COMAU	ITALY	INDUSTRIAL	_
6	PILZ INDUSTRIEELEKTRONIK SL	PILZ	SPAIN	INDUSTRIAL	
7	FRAUNHOFER GESELLSCHAFT ZUR FORDERUNG DER ANGEWANDTEN FORSCHUNG EV	ІРК	GERMANY	RTO	
8	ASOCIACION DE INVESTIGACION METALURGICA DEL NOROESTE	AIMEN	SPAIN	RTO	🗾 Frau
9	NETCOMPANY-INTRASOFT SA	INTRA	LUXEMBO URG	INDUSTRIAL	netcom
10	PRIMA ADDITIVE SRL	PRIMA	ITALY	END USER	intrasc
11	VISUAL COMPONENTS OY	VIS	FINLAND	INDUSTRIAL	
12	FORD ESPANA SL	FORD	SPAIN	END USER	
13	ITERA SOLUCIONES DE INGENIERIA SL	ITERA	SPAIN	INDUSTRIAL	COMPONENTS
14	TEACHING FACTORY COMPETENCE CENTER	TF-CC	GREECE	INDUSTRIAL	Teaching Factory
15	KAWADA ROBOTICS CORPORATION	KAWADA	JAPAN	RESEARCH	
16	CRANFIELD UNIVERSITY	CU	UK	RESEARCH

Nikos Dimitropoulos - LIVIS

# **CONVERGING Motivation**

- tremendous challenges on the manufacturing firms due to global scale occurrences including economic crisis and an unprecedented pandemic.
- both human and automated resources that can work together seamlessly or mutually exchange tasks, allowing the execution of any process plan in more than one, non-predetermined ways
- > significant **breakthroughs** that can support flexible production in smart factory setups
  - **Perceive**: Identify and recognize, process, resources, environment and their actual status
  - **Reason**: Analyze the status of production system and autonomously formulate plan of actions
  - Adapt: Automatically apply modifications to h/w and control systems to execute formulated plan
  - Collaborate: Seamlessly work with humans or other resources to achieve high quality/ performance
  - Innovate: Expand capabilities through allowing introduction of new technologies and Openness

### **CONVERGING vision** is:

"to develop, deploy, validate and promote smart and reconfigurable production systems including multiple autonomous agents (collaborative robots, AGVs, humans) that are able to act in diverse production environments. The diversifying factors will be a multi-level AI based cognition (line, station, resource levels) which will exploit the collective perception (Digital Pipeline) of these resources, allowing them to interact with each other and seamlessly coexist with humans under a «social industrial environment» that ensures trustful, safe and inclusive user experience"

# **CONVERGING Objectives**

CONVERGING HEU - TT 101058521

- Objective O1: Implementing a highly reconfigurable production system by deploying collaborative robotics and smart mechatronic devices, relying on multi-level AI to achieve autonomy
- Objective O2: Providing open and standard means to interconnect all production entities (Big Data pipeline) for real time capturing (Digital Twin), storing (Data at Rest) and processing (Data in Motion) to support autonomous and collaborative behaviour with minimal user intervention
- Objective O3: Establishing a human centered social-industrial environment where all activities and interactions with humans are dynamically shaped to maximize user experience, trust, skills & safety
- Objective O4: Providing the software and hardware interfaces to ensure safe and seamless interaction with collaborative robotic solutions, minimizing learning curves and setup times
- Objective O5: Create innovation ecosystem through a network of open Pilot Lines - involving robotic application stakeholders, SMEs and RTOs to inspire further development and deployment

#### Automotive use case - FORD

**Current State** 

- Polishing of stamping dies
- Manual work
- Labor intensive operations ergonomic issues
- Subjective evaluation of polishing result

- Robotized polishing of stamping dies
- Human robot collaboration
- Operator to mark the areas to be polished
- Mobile/stationary robot to automatically polish the marked areas
- Quality control

#### White goods use case - ELUX

**Current State** 

- Assembly of kitchen hobs
- Manual work
- Labor intensive operations ergonomic issues
- Productivity constraints

- Human robot collaborative assembly
- Humanoid dual arm robot
- Space and part sharing
- Identification of human actions prediction
- Advanced environment and process perception

#### Aeronautics use case - IAI

#### **Current State**

- Inspection and maintenance of aircraft fuel tanks
- Manual work
- Exposure of humans to hazardous environment
- Quality assurance issues human errors

- Robotized inspection and maintenance of fuel tanks
- Remote monitoring teleoperation
- Operator support via advanced AR interfaces
- Operator to intervene in situ when needed

#### Additive manufacturing use case - PRIMA

**Current State** 

- Post processing of additive manufactured parts
- Manual work
- Exposure of humans to hazardous substances
- Quality assurance issues defects due to human work

- Human robot collaborative post processing
- Robotized blowing of powder teleoperation possible
- AGV for logistics tasks
- Medium payload robot to act as work holding device operator to perform support removal tasks
- Human action perception automatic robot pose adaptation

# **CONVERGING Workpackages (WPs)**

### Thank you for your attention!

### Nikos Dimitropoulos – LMS dimitropoulos@lms.mech.upatras.gr

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101058521.
