MANUFACTURING DATA NETWORKS

Shaping the Future of Manufacturing Data Networks

Dr Oscar Lazaro

25-26 September 2023, EFFRA Manufacturing Partnership Day

PROJECT DESCRIPTION

European “Data as a PProduct” Value
Ecosystems for Resilient Factory 4.0
Product and ProDUCTION Continuity and
Sustainability

Project No: 101058384

Duration: 36 Months

Start Date: 1st June 2022

Partnership: 31 Partners, 12 Countries

Strategic Objective: HORIZON-CL4-2021-TWIN-
TRANSITION-01-08

Total Budget: 11.944.650 €

EC Contribution: 7.991.699 €

Business Challenge: Resilient Green Growth

Technical Challenge: Manufacturing Data Networks

Project Website: www.re4dy.eu

Who is RE4DY?

Coordination

Open Digital Manufacturing Platforms & Infrastructures

Manufacturing Resilience Expertise

Advanced Manufacturing Technology Providers

Resilient Product and Process Pilots

Standards & TEFs

CHALLENGES & BARRIERS

99%

Manufacturing Data Value is Lost

Manufacturing Data Network

Market Challenges

LACK OF TRUST

57 %

of organizations reveal valuable data

59 %

of organizations have loose control over data

55 %

of processes & systems are inconsistent

32 %

of organizations use common tools & platforms

LACK OF COST-EFFICIENCY

55 %

of organizations find High cost in 3rd party data licensing

49 %

of Contracting terms of (data licenses) are very diverse

54 %

of organizations have Low confidence in data quality

50 %

of organizations find Hard to combine data

LACK OF INTEROPERABILITY

70-80%

Time & Efforts in organizations are invested in managing

- Data acquisitions
- Integration
- Quality Management

Manufacturing Data Network

Stakeholder Barriers

LACK OF SUPPLIER- MANUFACTURER CONNECTION

Most manufacturing organizations don't share their data with their suppliers to drive efficiency

LACK OF TOOLS

Most manufacturing organizations don't have any tools to respond to the data and continuity challenge

LACK OF OPERABILITY

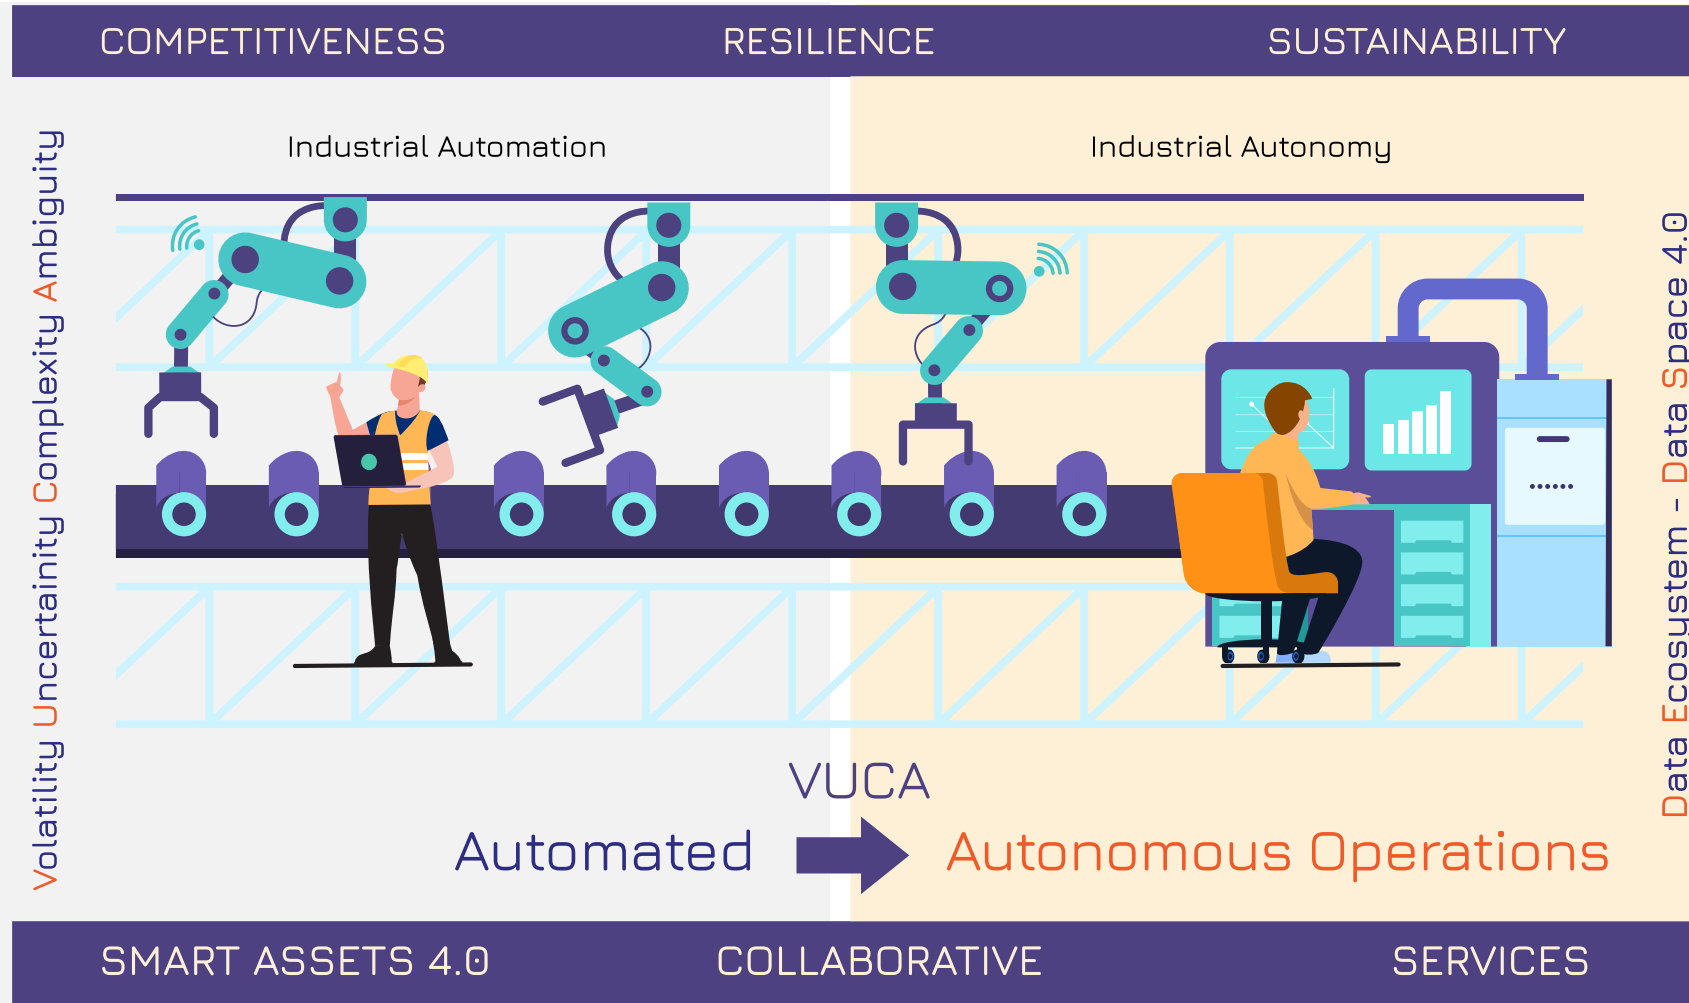

Most manufacturing organizations struggle with data exchanges and keeping safe, reliable functioning operable processes and systems

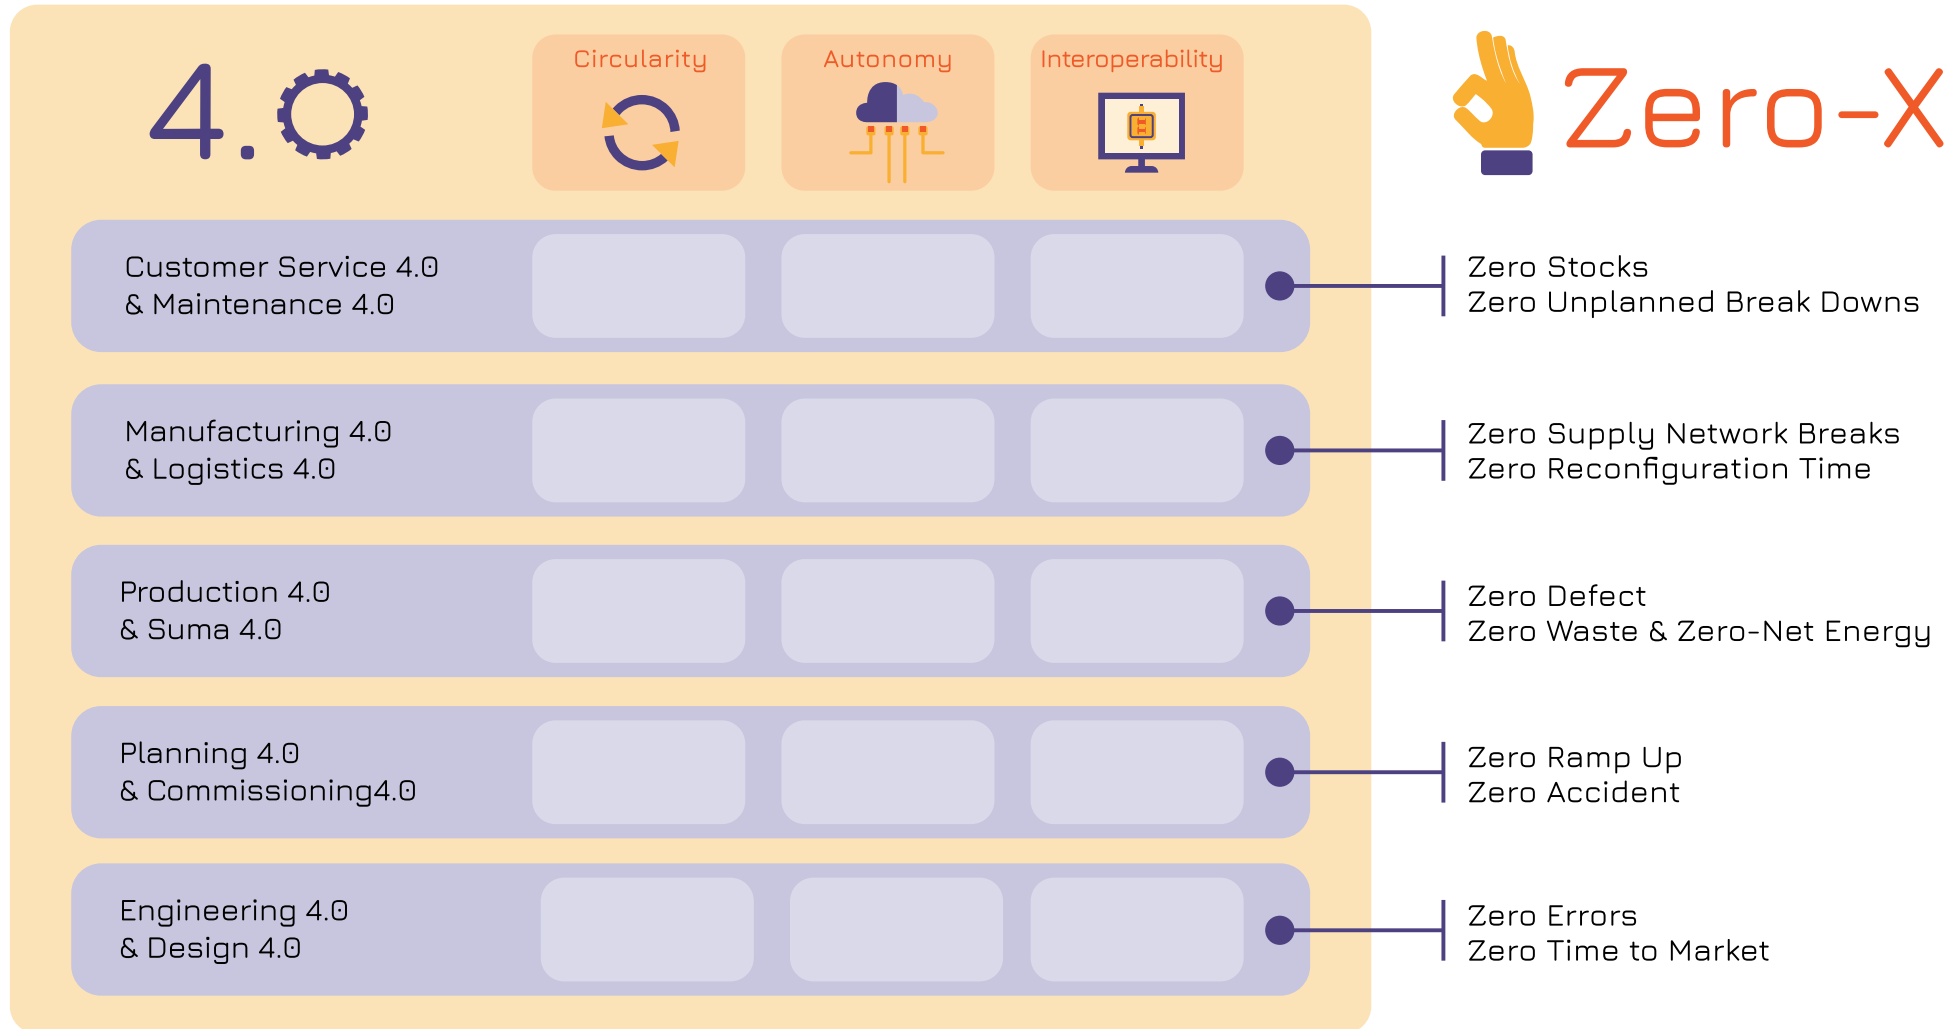

PROJECT APPROACH

RE4DY Vision

Zero-X Manufacturing Framework

Active Resiliency Strategies for Zero-X Manufacturing

Demand Facing Resiliency

 1 Product portfolio Focus on product availability through active portfolio management	 2 Customer orientation Level of diversity and geographic proximity of client demand	 3 Financial viability Transparency on financial health across the end-to-end value chain	 4 Go-to-market channels Ability to serve demand through multiple diverse channels
--	--	---	--

Supply Facing Resiliency

 5 Logistics system Strong visibility, flexibility, and control over warehousing, inventory, and transportation	 6 Manufacturing network Production network designed with resiliency in mind	 7 Supplier landscape Multiple and diverse sources of supply	 8 Advanced planning Ability to rapidly sense shifts in supply and demand and pivot appropriately
--	---	---	--

Business approach

 Be rapid response-ready Tailoring manufacturing and supply systems quickly to adapt to consumer behavior
 Adopt high-tech habits Using advanced tech to create agile manufacturing and supply systems
 Think global, act global Coordinating logistics within and across global value chains
 Free tasks from the factory floor Adopting new ways of working and governing to increase manufacturing resilience
 Take the united approach Sharing responsibility across companies and authorities to act on social and environmental challenges

Data Spaces for Manufacturing Pathway

Data are locked in Smart Products, Value Chains with limited access by external Users and Systems

Data are generated, processed and visualised by closed CPPS and I4.0 systems

No Data Control

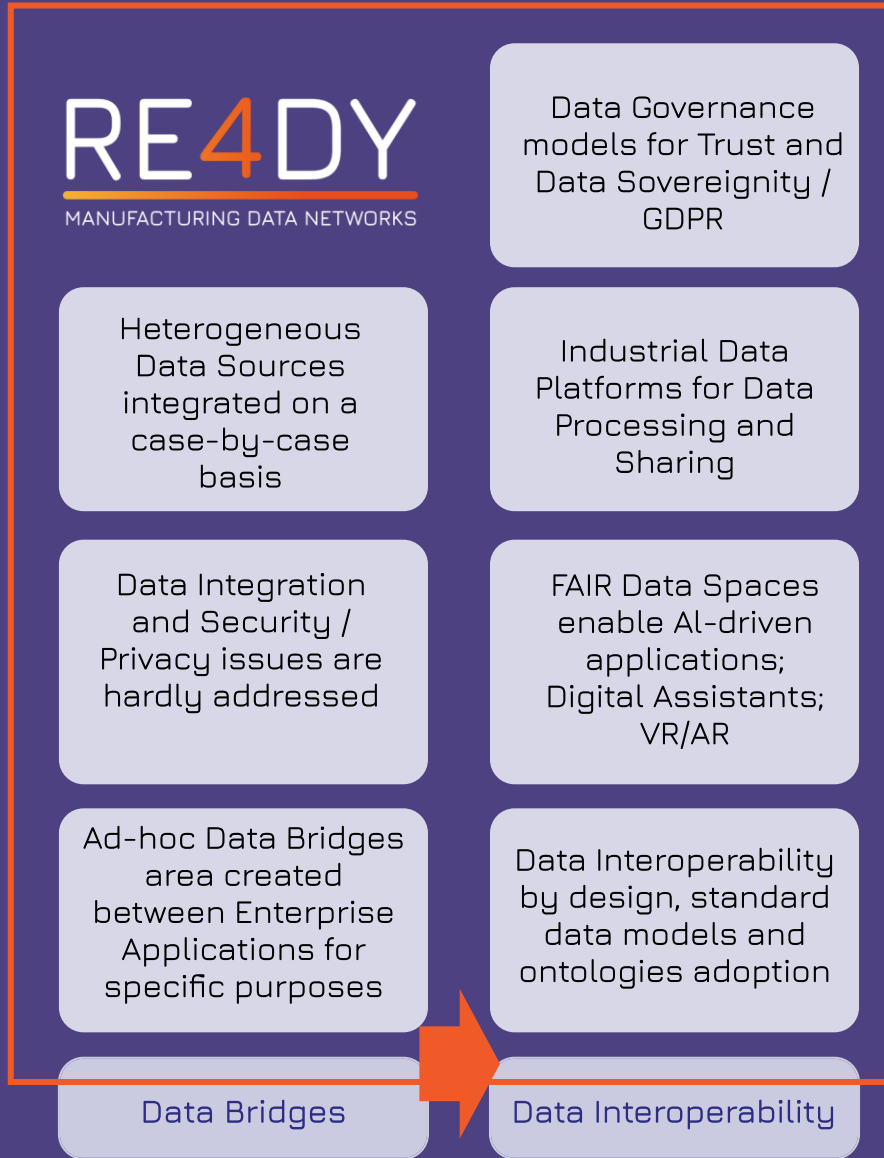

(Hyperconnected Factories) Data is locked in ERP SCM CRM enterprise applications

(Colaborative Product-Service Factories) Data is locked in CAD, PDM, PLM enterprise applications

(Smart Autonomous Factory) Data is locked in SCADA, MES, ERP enterprise applications

Data Silos

Multi-stakeholder Digital Passports for complex Product-Service Systems

Flexible cross-sector Manufacturing Data Marketplaces

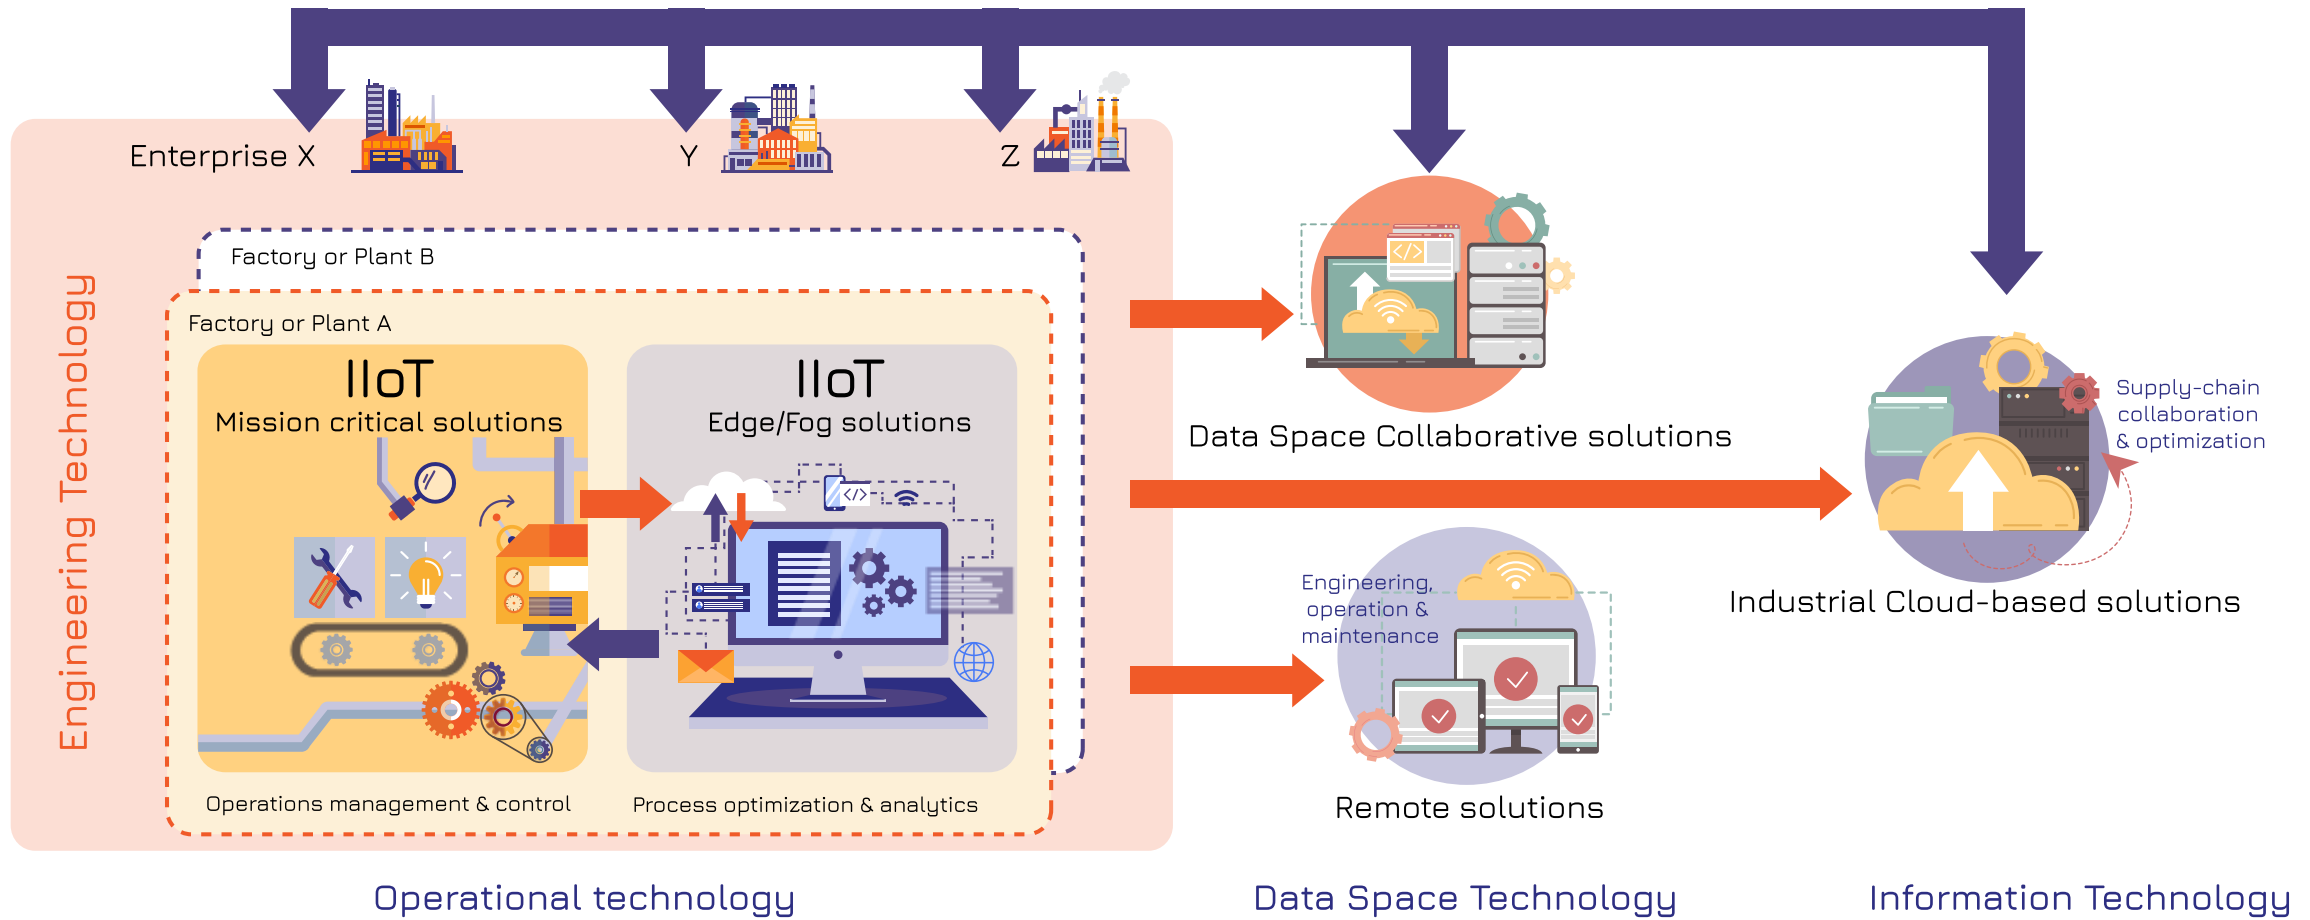

Open Data Ecosystems enabling Living Labs and Open Innovation

Data Economy take-up, Data-driven Innovative Business Models

Data Valorisation

MANUFACTURING DATA NETWORKS

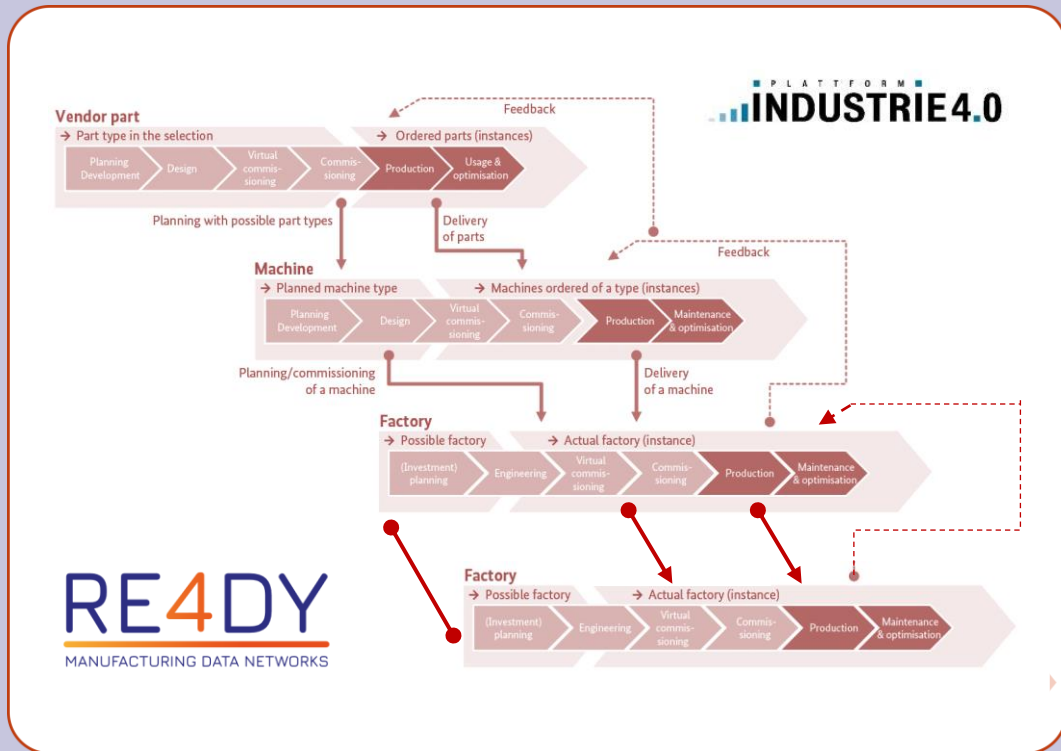

Factory 4.0 challenges do not lie just in the actual “storage of data or exchange of assets across digital platforms”

The real smart industry data challenge primarily lies on the **speed, transparency and trustfulness** in which highly heterogeneous and multi-domain interoperable data networks can be established and accessed.

Factory 4.0 operations will rely on **the real-time synchronisation** of such data networks across the many cross-sectorial big data lifecycles.

Manufacturing Data Networks Vision

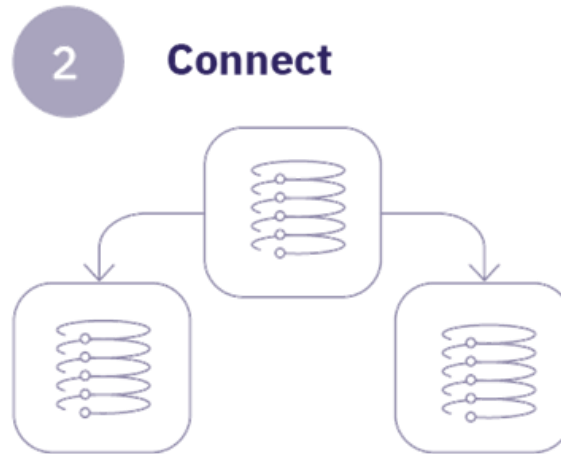

Boost 4.0
BIG DATA FOR FACTORIES

DATA NETWORK MANUFACTURING

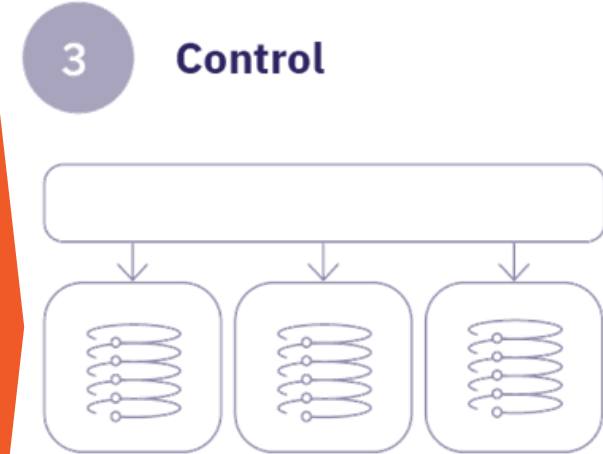

BIG DATA

The data platforms are moved to same infrastructure.

One data platform gets connected to another in an upstream-downstream combination.

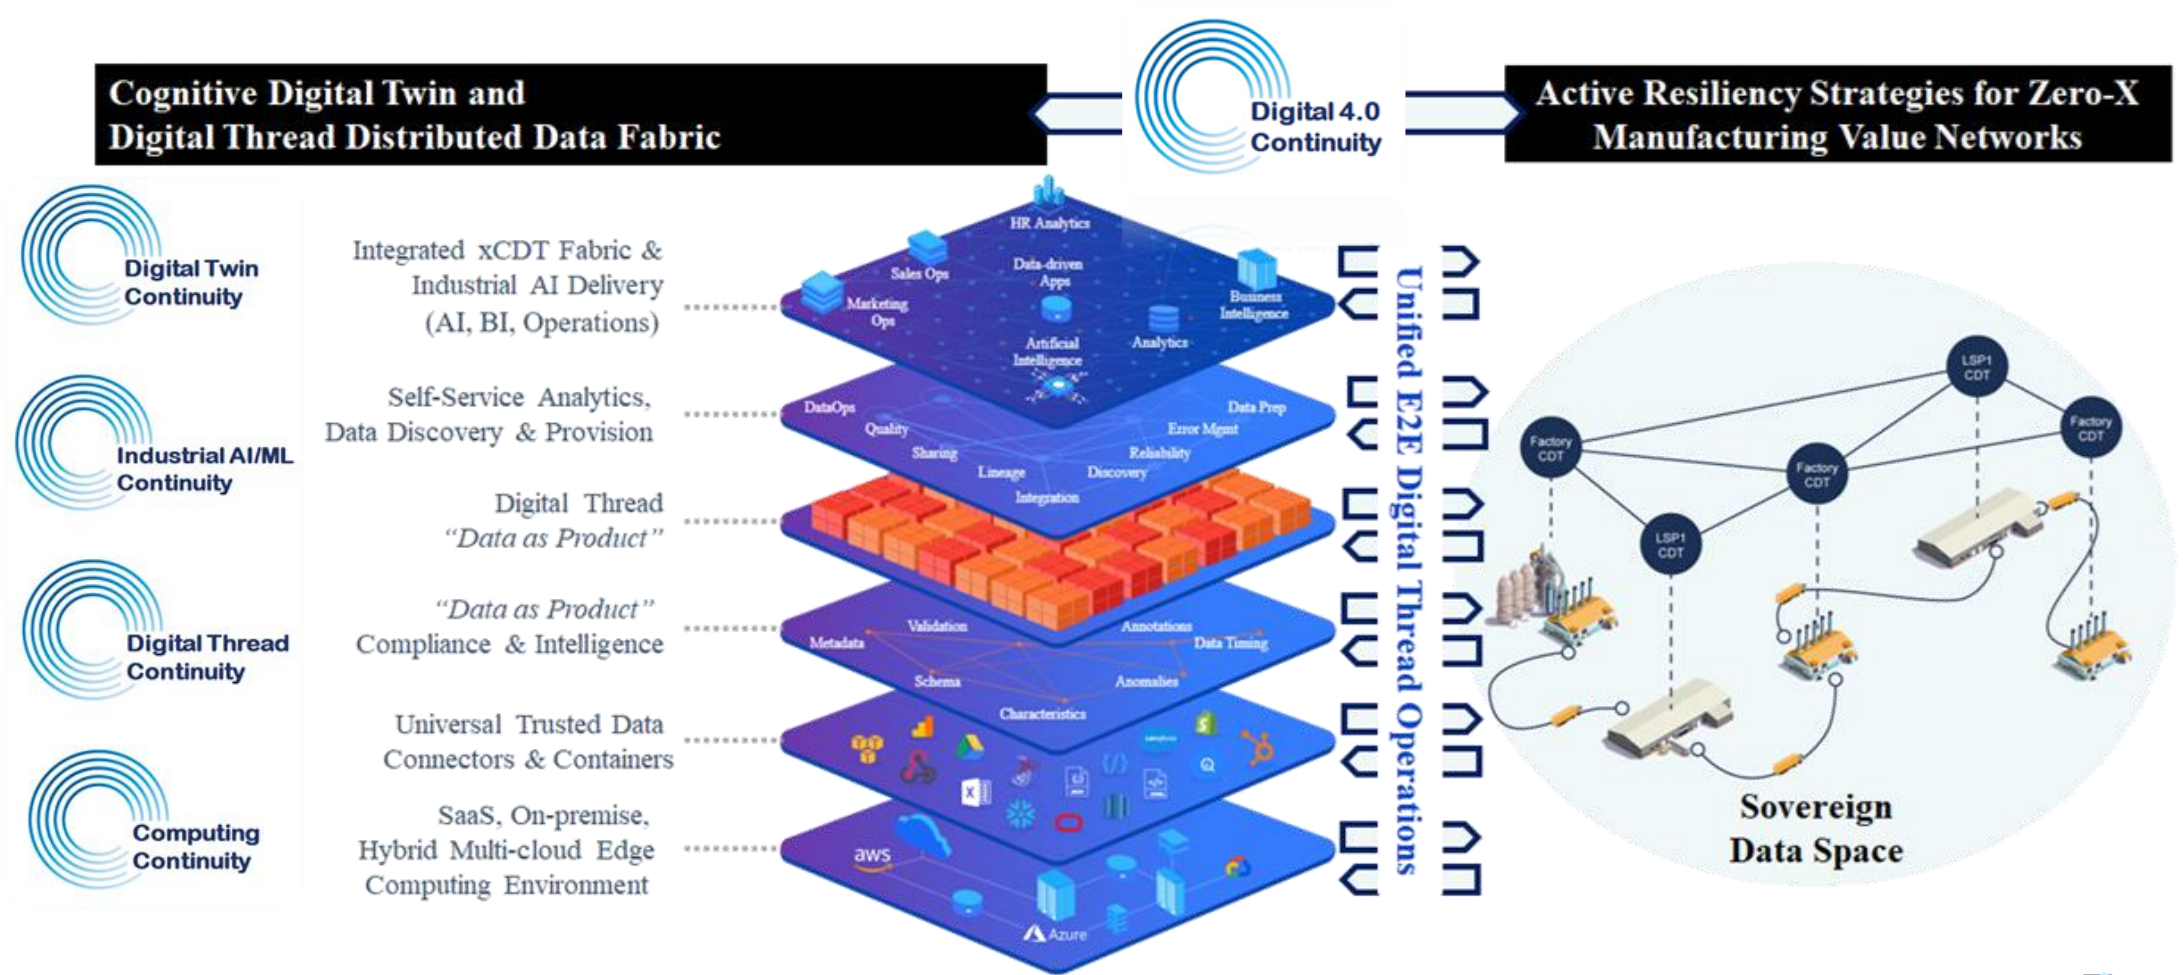

Have unified governance and management plane for multiple data platforms, which can be distributed and can evolve at their own pace and strength.

“Digital Continuity Toolkit”
